

DATA ANALYSIS PROJECT PROPOSAL

Project Title :

Airbnb Booking & Pricing Strategy Analysis

Team & Roles :

Jai Surya Prabhakaran(team leader)– Data Analysis & Documentation

Divya Bharathi Selvam- Data Collection,

Surya Prakash Nidamanuri – Visualization, Reporting

Introduction (dataset based) :

This project analyses the Airbnb listings dataset, which includes information such as property type, price, location, availability, and customer reviews. By examining these features, the project aims to understand how different factors influence pricing and booking patterns. The analysis helps identify trends in customer preferences and market behaviour, enabling better decision-making for hosts to improve occupancy and revenue

Problem Statement (dataset based) :

Airbnb hosts struggle to optimize pricing and occupancy as multiple factors like location, amenities, and reviews influence booking outcomes. However, the relationship between these factors remains unclear.

Business Questions :

1. What factors influence Airbnb pricing?
2. Which locations generate the highest revenue?
3. How do reviews affect booking rates?
4. What property types perform best?
5. Is there a seasonal trend in bookings?
6. What features increase occupancy rates?
